

TAYYAB SOHAIL – BACKEND / AI ENGINEER

■ Berlin, Germany | ■ tayyab.sohail@example.com | ■ github.com/TayyabSuhail123 | LinkedIn: tayyab-sohail

PROFILE

Versatile Backend & AI Engineer with 5+ years of experience building scalable Python services, AI-driven automation, and DevOps-ready systems. Strong focus on backend architecture, APIs, cloud infrastructure, and applied AI integration. Experienced in end-to-end delivery — from data pipelines to deployment automation — across startups and enterprise environments. Passionate about using AI and automation to make complex systems faster, safer, and smarter.

CORE SKILLS

Languages: Python (FastAPI, Flask, Django), SQL, TypeScript

AI & ML: LangChain, LangGraph, OpenAI APIs, LLM-based pipelines

Backend: REST APIs, Async SQLAlchemy, Pydantic, Celery, Temporal Workflows

DevOps: Docker, GitHub Actions, Terraform, Kubernetes, Ansible, AWS ECS / Fargate, S3, CloudFront

Databases: PostgreSQL, MySQL, Redis

Observability: Langfuse, Prometheus, Grafana

Other: CI/CD pipelines, IaC, Secure Secrets (Vault / ESO), Linux, Git

INCA Solutions GmbH, Berlin — AI Engineer / Backend Developer (Aug 2025 – Present)

- Designed and developed backend services for AI-driven insurance fraud detection using FastAPI, async SQLAlchemy, and Pydantic models.
- Built a multi-service architecture integrating Temporal workflows for asynchronous claim processing.
- Hosted Langfuse observability on AWS ECS Fargate with RDS and S3-based storage for trace data.
- Implemented a multi-repo retention service triggered by AWS EventBridge to automatically clean up legacy Langfuse data.
- Built and deployed modular Terraform configurations for development, staging, and production environments.
- Managed cross-environment secrets using GitHub OIDC and AWS Secrets Manager.
- Contributed to frontend fixes in React and established a stable e2e test suite using Playwright.
- Delivered key improvements to internal agent workflows and AI-driven automation pipelines.

WIIT AG, Düsseldorf — Site Reliability Engineer (2023 – 2025)

- Refactored the CI/CD pipelines to ensure reproducible deployments across environments.
- Introduced security scanning (Trivy, pip-audit) into build pipelines with idempotent job logic.
- Implemented and managed cross-environment Terraform modules, enhancing code reuse and stability.
- Designed GitHub Actions workflows with versioned, modular templates for testing and deployment.
- Integrated Prometheus + Grafana monitoring stack for production services.
- Enhanced security compliance with structured secrets handling and role-based infrastructure access.
- Automated infrastructure provisioning and configuration using Ansible playbooks.
- Deployed and managed containerized workloads on Kubernetes, ensuring high availability and scalability for core services.

birkle IT AG, Munich — DevOps Engineer (2021 – 2023)

- Designed and deployed Terraform-based AWS infrastructure including ECR, ECS, and ALB modules.

- Automated image building, testing, and deployment using GitHub Actions with semantic-release integration.
- Maintained IaC consistency across environments and developed reusable Terraform modules for faster scaling.
- Implemented Docker-based local environments mirroring production infrastructure.
- Introduced version-controlled, automated workflows ensuring minimal human intervention in deployment.

marcapo GmbH, Bamberg — Student Fullstack Engineer (2019 – 2021)

- Developed backend features and integrated REST APIs within a modular architecture.
- Modernized legacy systems, migrating core services to containerized environments using Docker.
- Enhanced testing and deployment automation pipelines for increased reliability.
- Collaborated with frontend developers to improve system performance and reduce page load times.
- Led integration of continuous testing in CI/CD pipelines using GitHub Actions.

Shopistan.pk, Lahore — Senior Fullstack Engineer (Oct 2016 – Oct 2018)

- Led development of backend microservices and database integrations for large-scale eCommerce platforms.
- Designed and maintained RESTful APIs for internal systems and client-facing applications.
- Improved database performance and implemented optimized caching layers.
- Managed Dockerized deployments with GitLab CI/CD and version control automation.
- Mentored junior engineers on best practices in Python, REST API design, and CI/CD workflows.

PROJECTS

- ContractCopilot – AI Legal Document Risk Scanner: Scans contracts for legal risks using LangChain, Guardrails, and Langfuse.
- DevOps Copilot Agent – AI-Driven CI/CD Improvement Assistant: LangGraph-based AI agent that optimizes GitHub Actions workflows.
- AI DJ Set Builder – SoundCloud Playlist Analyzer: Analyzes SoundCloud playlists with Librosa to create AI-optimized DJ set orders.
- CV & JD Matcher – AI-Powered Resume Fit Evaluator: Uses LangChain RAG, Guardrails, and Evals to assess resume-job fit.
- INCA Fraud Detection Backend – Backend powering AI-based insurance claim validation using FastAPI, Temporal, and ECS.

EDUCATION

Otto-Friedrich-Universität Bamberg, Germany | Feb 2019 – 2022

Bachelor's Thesis: Simulating AWS services locally using Docker containers to implement Dev/Prod parity. Used benchmarking techniques to compare both environments (Grade: 1.0).

University of Central Punjab, Pakistan | 2012 – 2016

Bachelor of Science in Computer Science

Final Project: Android fitness application that tracked calorie intake and output, generating predictive trend analysis in chart form.
